

Minutes of the PROTECT special workshop about MSW

Location: Rotterdam Port Authority, Location Heijplaat.

Date: 19 February 2014

For participants: See website.

1. Opening by Chairman

The chairman introduced Mr. Rob Gutteling, Deputy Harbour Master of the port of Rotterdam.

2. Welcome by Mr. Gutteling

Mr. Gutteling welcomed all attendees and stressed the importance of a Safe, Clean, Efficient and Secure port. Workshops like this are important to liaise with other ports in order to harmonize the implementation of the various EU-directives on the above subjects.

3. Germany

Uwe Kraft presents the German situation, supported by Stephan Gund. The presentations can be downloaded from the website.

Topics include:

- For the Crew List and Passenger List new messages must be developed by PROTECT.
- For this information the privacy rules must be obeyed.
- According to Lazaros the EU Directive 95/46 authorizes the reporting of personal data to the authorities.
- Responses on Incomplete or incorrect messages must include warnings, and should not be rejected, unless the structure is incorrect which prohibits the proper processing of such message.
- Germany will not require a health declaration
- The format of the visit-id has been defined in the ANNA project:
XXXXX (Un-Locode), YY (year), 9999999 (7 digit sequence number)
Example: DEHAM140193988
- Customs Info is not included.

4. Portbase (The Netherlands)

Hans Rook presents the Dutch situation of Portbase including a live demo of the integration with the HaMIS system of the Port of Rotterdam Authority.

Worth mentioning is the fact that there will be no web interface with the NSW.

5. EMSA

Lazaros Aichmalotidis explains the Reporting Formalities Directive 2010/65/EU.

His presentation can be downloaded from the PROTECT website.

He confirms that the various business rules have been developed and approved (by whom?). These documents are also available on the PROTECT website.

An NSW prototype project is underway with the following countries: BG-GR-IT-MT-RO-NO.

He asks if PROTECT is prepared to assist with the mapping of the Edifact messages.

6. Belgium

Nico de Cauwer confirms that the situation in Belgium can be compared with Germany, and refers to the PROTECT quick scan version 0.9.

7. France

Frederic Gilletta explains the status in France with 45 ports. See also his presentation made during the previous meeting on NSW, and refers to the same quick scan

8. United Kingdom

Unfortunately Ole Krebs could not attend to this workshop. Raymond Seignette gives a brief recapitulation on the basis of a diagram from a previous presentation. Again reference to the quick scan on the PROTECT website

9. The Netherlands

Raymond Seignette presents a view on the data quality and re-use of data in a NSW environment.

His presentation can be downloaded from the PROTECT website.

After some discussion it was concluded that some data can be re-used, but this is not the same as sharing data. Some static data, like for example, Ships Information, can be shared, whilst dynamic data, like cargo information, can be re-used.

10. Recapitulation

Herman also summarized a few conclusions. Please consult Herman for these.

Herman recapitulates the relationship of PROTECT with EMSA and thanks Lazaros for his attendance and contribution to the workshop.

Lazaros explains that he is pleased to give his cooperation and will be glad to accept any assistance from PROTECT.

Herman thanks all participants and closes the meeting/workshop. Next meeting: 26/3/2014.
